Office Action Summary	Application No. 10/797,053	Applicant(s) KURAMOTO ET AL.	
	Examiner Erin D. Chiem	Art Unit 2883	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

The submission of the translated foreign priority application document overcame the rejection of office action mailed November 3, 2006. Prosecution is hereby reopened in view of re-search and consideration of the application.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3, 5-8, 10, 13-16, 21 and 25 are rejected under 35 U.S.C. 102(b) as being anticipated by Yamamoto et al. (US 6,222,972 B1).

Yamamoto discloses an optical fiber that is considered art equivalent as an optical waveguide, having a clad layer, a core layer which forms an optical transmission region, a stress moderating layer (stress buffer layer) provided between the core and the clad (Table 1). The clad, core, and stress buffer layer is formed from an organic-inorganic composite such as an organic polymer and a metal alkoxide (see Abstract and col. 5, lines 60-64). Yamamoto further discloses the stress buffer layer should be more flexible than the clad layer to prevent transmission loss due to the polymeric shrinkage at low temperatures (col. 4, lines 45-58, col. 9,

lines 1-5). Please see Tables 1-4 for comparative examples of the various experimented properties.

Allowable Subject Matter

Claim 4 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
